

Center for Flexible Electrical Networks FEN

Research for the grids of the future

Services and benefits for industry partners, institutes and students

- Unique association of companies and institutes of the RWTH Aachen University
- Combination of scientific and economic research allows an intensive exchange of knowledge
- Extensive research infrastructure: Laboratories, test-benches, DC Experimental Building
- Practical research, projects and theses
- Technical seminars and executive education
- Support for applications of EU funded research projects

The aim of the Center for FEN is to investigate and to develop an intelligent power grid. This power grid needs to secure the future energy supply with a high share of volatile, renewable and decentralized energy sources.

A sustainable, reliable and affordable energy supply in the future is the common aim.
